Docket No.: 4799-0223PUS1

MGOR

Application No. 09/989,289 Amendment dated December 26, 2006

Please amend the claims as follows:

1-34. (Canceled)

35. (Previously Presented) A toneable conduit, comprising:

an elongate polymeric tube having a wall with an interior surface and an exterior surface, a channel extending longitudinally within the wall of the elongate polymeric tube; and a stabilizing rib extending longitudinally along the interior surface of the wall of the elongate polymeric tube and located radially inward from and directly under said channel; and

a continuous wire coincident with the channel in the elongate polymeric tube and having sufficient strength to tear through the conduit;

said wire capable of transmitting a toning signal to allow the conduit to be detected by toning equipment.

36-41. (Canceled)

- 42. (Previously presented) The toneable conduit according to Claim 35, wherein the wire is selected from the group consisting of copper-clad steel wire, copper-clad aluminum wire, copper wire, and tin copper wire.
- 43. (Previously presented) The toneable conduit according to Claim 35, wherein the wire is copper-clad steel wire.
- 44. (Previously presented) The toneable conduit according to Claim 35, wherein the wire has a diameter of from about 0.32 mm to about 2.59 mm.
- 45. (Previously Presented) The toneable conduit according to Claim 35, wherein said wire is coated with a coating composition that prevents the wire from adhering to the polymer melt used to form the polymeric tube.

SLL/mmi

Docket No.: 4799-0223PUS1

- 46. (Previously Presented) The toneable conduit according to Claim 45, wherein the coating composition is formed of a polymeric material selected from the group consisting of fluoropolymers, polyamides, polyesters, polycarbonates, polypropylene, polyurethanes, polyacetals, polyacrylics, epoxies and silicone polymers.
- 47. (Currently Amended) The toneable conduit according to <u>Claim 45</u> Claim 46, wherein the coating composition is formed of a polymeric material that has a melting temperature of at least about 500°F.
- 48. (Currently Amended) The toneable conduit according to <u>Claim 45</u> Claim 47, wherein the coating composition is formed of polytetrafluoroethylene.
- 49. (Previously Presented) The toneable conduit according to Claim 35, wherein said elongate tube has a predetermined wall thickness.
- 50. (Previously Presented) The toneable conduit according to Claim 49, wherein the exterior surface of the tube is smooth.
- 51. (Previously Presented) The toneable conduit according to Claim 35, wherein said elongate polymeric tube is formed of a polymeric material selected from the group consisting of polyethylene and polyvinyl chloride.
- 52. (Previously Presented) The toneable conduit according to Claim 51, wherein said elongate polymeric tube is formed of high density polyethylene.
- 53. (Previously Presented) The toneable conduit according to Claim 35, further comprising at least one additional rib extending longitudinally along the interior surface of the elongate polymeric tube to facilitate the installation of cable within the conduit.

Docket No.: 4799-0223PUS1

54-56. (Canceled)

57. (Previously Presented) A method of coupling a first toneable conduit with a second toneable conduit, comprising the steps of:

providing a first toneable conduit comprising an elongate polymeric tube having a wall with an interior surface and an exterior surface; a channel extending longitudinally within the wall of the elongate polymeric tube; and a stabilizing rib extending longitudinally along the interior surface of the wall of the elongate polymeric tube and located radially inward from and directly under said channel; and a continuous wire coincident with the channel in the elongate polymeric tube;

providing a second toneable conduit comprising an elongate polymeric tube having a wall with an interior surface and an exterior surface; a channel extending longitudinally within the wall of the elongate polymeric tube; and a stabilizing rib extending longitudinally along the interior surface of the wall of the elongate polymeric tube and located radially inward from and directly under said channel; and a continuous wire coincident with the channel in the elongate polymeric tube;

tearing the wire of the first toneable conduit through the exterior surface of the first toneable conduit;

tearing the wire of the second toneable conduit through the exterior surface of the second toneable conduit;

mechanically connecting the first conduit and second conduit; and

electrically connecting the wire from the first toneable conduit and the wire from the second toneable conduit.

58. (Previously Presented) The method according to Claim 57, said providing steps comprising providing a first toneable conduit and a second toneable conduit wherein the wire in the first toneable conduit and in the second toneable conduit is a copper-clad steel wire.

Docket No.: 4799-0223PUS1

- 59. (Previously Presented) The method according to Claim 57, said providing steps comprising providing a first toneable conduit and a second toneable conduit wherein the wire in the first toneable conduit and in the second toneable conduit is coated with a coating composition that comprises polytetrafluoroethylene.
- 60. (Previously Presented) The method according to Claim 57, said providing steps comprising providing a first toneable conduit and a second toneable conduit wherein the elongate polymeric tube of the first toneable conduit and the second toneable conduit is formed of high density polyethylene.

## 61-67. (Canceled)

- 68. (Currently Amended) The toneable conduit according to <u>Claim 45</u> Claim 61, wherein the wire is selected from the group consisting of copper-clad steel wire, copper-clad aluminum wire, copper wire, and tin copper wire.
- 69. (Currently Amended) The toneable conduit according to <u>Claim 45</u> Claim 61, wherein the wire is copper-clad steel wire.
- 70. (Currently Amended) The toneable conduit according to Claim 45 Claim 61, wherein the wire has a diameter of from about 0.32 mm to about 2.59 mm.

## 71-74. (Canceled)

- 75. (Currently Amended) The toneable conduit according to Claim 45 Claim 61, wherein said elongate tube has a predetermined wall thickness.
- 76. (Previously Presented) The toneable conduit according to Claim 75, wherein the exterior surface of the tube is smooth.

Docket No.: 4799-0223PUS1

- 77. (Currently Amended) The toneable conduit according to <u>Claim 45</u> Claim 61, wherein said elongate polymeric tube is formed of a polymeric material selected from the group consisting of polyethylene and polyvinyl chloride.
- 78. (Previously Presented) The toneable conduit according to Claim 77, wherein said elongate polymeric tube is formed of high density polyethylene.
- 79. (Currently Amended) The toneable conduit according to <u>Claim 45</u> Claim 61, further comprising at least one additional rib extending longitudinally along the interior surface of the elongate polymeric tube to facilitate the installation of cable within the conduit.

80-93. (Canceled)

- 94. (Currently Amended) The toneable conduit according to <u>Claim 47</u> Claim 87, wherein the wire is selected from the group consisting of copper-clad steel wire, copper-clad aluminum wire, copper wire, and tin copper wire.
- 95. (Currently Amended) The toneable conduit according to <u>Claim 47</u> Claim 87, wherein the wire is copper-clad steel wire.
- 96. (Currently Amended) The toneable conduit according to <u>Claim 47</u> Claim 87, wherein the wire has a diameter of from about 0.32 mm to about 2.59 mm.
  - 97. (Canceled)
- 98. (Currently Amended) The toneable conduit according to Claim 47 Claim 87, wherein the coating composition is formed of a polymeric material selected from the group

Docket No.: 4799-0223PUS1

consisting of fluoropolymers, polyamides, polyesters, polycarbonates, polypropylene, polyurethanes, polyacetals, polyacrylics, epoxies and silicone polymers.

MGOR

## 99. (Canceled)

- (Currently Amended) The toneable conduit according to Claim 47 Claim 99, 100. wherein the coating composition is formed of polytetrafluoroethylene.
- (Currently Amended) The toneable conduit according to Claim 47 Claim 87, 101. wherein said elongate tube has a predetermined wall thickness.
- (Previously Presented) The toneable conduit according to Claim 101, wherein the 102. exterior surface of the tube is smooth.
- (Currently Amended) The toneable conduit according to Claim 47 Claim 87, 103. wherein said elongate polymeric tube is formed of a polymeric material selected from the group consisting of polyethylene and polyvinyl chloride.
- (Previously Presented) The toneable conduit according to Claim 103, wherein 104. said elongate polymeric tube is formed of high density polyethylene.
- (Currently Amended) The toneable conduit according to Claim 47 Claim 87, 105. further comprising at least one additional rib extending longitudinally along the interior surface of the elongate polymeric tube to facilitate the installation of cable within the conduit.

## 106-112. (Canceled)

(Previously Presented) The toneable conduit according to claim 35, wherein the stabilizing rib is integral with the elongate polymeric tube.

Docket No.: 4799-0223PUS1

(Currently Amended) The toneable conduit according to Claim 45 Claim 61, 114. wherein the stabilizing rib is integral with the elongate polymeric tube.

(Currently Amended) The toneable conduit according to Claim 47 elaim 87, 115. wherein the stabilizing rib is integral with the elongate polymeric tube.

116-127. (Canceled)

128. (New) The toneable conduit according to Claim 43, wherein the wire has a diameter of from about 0.32 mm to about 2.59 mm.

(New) The toneable conduit according to Claim 43, wherein said wire is coated with a coating composition that prevents the wire from adhering to the polymer melt used to form the polymeric tube.

(New) The toneable conduit according to Claim 129, wherein the coating composition is formed of a polymeric material selected from the group consisting of fluoropolymers, polyamides, polyesters, polycarbonates, polypropylene, polyurethanes, polyacetals, polyacrylics, epoxies and silicone polymers.

131. (New) The toneable conduit according to Claim 129, wherein the coating composition is formed of a polymeric material that has a melting temperature of at least about 500°F.

(New) The toneable conduit according to Claim 129, wherein the coating composition is formed of polytetrafluoroethylene.

Docket No.: 4799-0223PUS1

Application No. 09/989,289 Amendment dated December 26, 2006

- 133. (New) The toneable conduit according to Claim 43, wherein said elongate tube has a predetermined wall thickness.
- 134. (New) The toneable conduit according to Claim 133, wherein the exterior surface of the tube is smooth.
- 135. (New) The toneable conduit according to Claim 43, wherein said elongate polymeric tube is formed of a polymeric material selected from the group consisting of polyethylene and polyvinyl chloride.
- 136. (New) The toneable conduit according to Claim 135, wherein said elongate polymeric tube is formed of high density polyethylene.
- 137. (New) The toneable conduit according to Claim 43, further comprising at least one additional rib extending longitudinally along the interior surface of the elongate polymeric tube to facilitate the installation of cable within the conduit.
- 138. (New) The toneable conduit according to claim 43, wherein the stabilizing rib is integral with the elongate polymeric tube.
